Reside in: Moscow, metro station Vodny Stadion

Citizenship: Russia, work permit at: Russia

Готов работать удалённо, not ready for business trips

Desired position and salary

Frontend разработчик

Specializations:

— Programmer, developer

Employment type: full time, part time, project work/one-time assignment

Work format: remote

Desired travel time to work: any

Work experience — 8 years 6 months

January 2024 — till
now
2 years 5 months

Freelance / Private Projects

Moscow

Frontend Engineer / Web Developer

Develop landing pages, dashboards, and product interfaces for private projects and small business tasks.

Turn designs and ideas into working Next.js/React applications: pages, components, forms, loading states, and error states.

Polish projects to a production-ready level: responsive layouts, multi-language support, themes, basic SEO, and clear data structure.

Pay attention to product perception: copy, cards, empty states, micro-interactions, and mobile behavior.

SberTech

Moscow

Frontend Developer

Contributed to internal web platforms and interfaces for team workflows.

Built React components, pages, and backend API integrations while maintaining the existing frontend architecture.

Worked with SSR scenarios, interface states, forms, tables, and complex user flows.

Participated in code reviews, bug fixing, UI optimization, and preparing changes for release.

Helped make the UI more predictable: fewer edge-case bugs, clearer component behavior, and more stable user scenarios.

Rambler&Co

Moscow, rambler.ru/

IT, System Integration, Internet

- Internet Company (Search Engines, Payment Systems, Social Networks, Information and Educational, Entertainment Resources, Website Promotion etc.)

Media, Marketing, Advertising, PR, Design, Production

- Production of Multimedia and Content, Editing
- Marketing, Advertising, Designer, Event and PR Agencies

Frontend Developer / QA Engineer

Started as a QA Engineer: checked requirements, wrote test scenarios, found defects, and reproduced edge cases.

Gradually moved into frontend development and helped maintain client-facing interfaces. Worked with legacy code, helped migrate separate parts of the UI to React, and simplified page maintenance.

My QA background helps me treat frontend not only as markup, but as a product scenario with errors, constraints, and real users.

Further information

About me

I develop modern web interfaces and production-ready applications using React, Next.js, and TypeScript.

I handle frontend tasks end-to-end—from initial concept and UI design to stable release: component architecture, responsive design, performance optimization, interface state management, and polished user experiences.

As a frontend engineer, I'm passionate about refining interfaces until they're genuinely intuitive and enjoyable to use. I work with React, Next.js, and TypeScript to build clear, maintainable component structures, with careful attention to responsiveness, state handling, forms, load performance, and UX details.

In my projects, I care not only about visually appealing screens but also about how the interface handles real-world data, errors, mobile devices, and future iterations. I have experience with SSR, REST APIs, internationalization (i18n), design systems, accessibility (a11y), UI animations, and technical SEO.
